PENDING CLAIMS AS AMENDED

Please amend the claims as follows:

1. (Currently amended) A remote station apparatus comprising:

a link quality estimation unit operative to generate a link quality estimation in response to

a first power control instruction received on a common channel; and

a power control unit coupled to the link quality estimation unit, the power control unit

operative to generate a second power control instruction in response to the link quality estimate,

wherein the second power control instruction is used to adjust the includes one or more

commands configured to adjust a transmit power of the common channel at a base station.

2. (Original) The remote station apparatus of claim 1, wherein the remote station

apparatus controls transmission power in response to the first power control instruction.

3. (Original) The remote station apparatus of claim 1, wherein the remote station

apparatus transmits the second power control instruction.

4. (Currently amended) A base station apparatus comprising:

a decoder; and

a determination unit coupled to the decoder, the determination operative to determine a

received power control instruction for base station transmission on a common channel; and

an adjustment unit coupled to the determination unit, the adjustment unit operative to

adjust a transmission power level of the power control instruction.

5. (Previously presented) A base station apparatus comprising:

a control processor for power control of transmission of power control instructions on a

common channel, wherein a transmission power level of the power control instruction is initially

set to a reference value; and

an amplifier operative to adjust a power level of the power control instructions.

6. (Cancelled)

Attorney Docket No.: 000411

Customer No.: 23696

7. (Currently amended) A method for power control in a wireless apparatus

operative in a communication system having a forward link and a reverse link, the system

transmitting power control bits on a forward link common channel, the method comprising:

measuring a SNR of at least one power control bit for controlling a reverse link; and

determining a power control decision for the forward link based on the SNR, wherein the

power control decision is used to adjust the includes one or more commands configured to adjust

a transmit power of the common channel at a base station.

8. (Original) A method for power control in a wireless communication system, the

system having a forward link and a reverse link, the system transmitting power control

instructions on a forward link common channel, the method comprising:

determining a first power control instruction for control of the reverse link;

in response to receiving a second power control instruction on the reverse link, the

second power control instruction for control of the forward link, determining a first transmission

power level; and

transmitting the first power control instruction at the first transmission power level on the

common channel.

9. (Cancelled)

10. (Cancelled)

11. (Previously presented) The base station apparatus of claim 4, wherein a

transmission power level of the power control instruction is initially set to a reference value.

12. (Previously presented) The remote station apparatus of claim 1, wherein the link

quality estimate is a SNR.

Attorney Docket No.: 000411

Customer No.: 23696

13. (New) A method for power control in a remote station apparatus, the method

comprising:

generating a link quality estimation in response to a first power control instruction

received on a common channel; and

generating a second power control instruction in response to the link quality estimate,

wherein the second power control instruction includes one or more commands configured

to adjust a transmit power of the common channel at a base station.

14. (New) The method of claim 13, further comprising controlling transmission

power in response to the first power control instruction.

15. (New) The method of claim 13, further comprising transmitting the second power

control instruction.

16. (New) The method of claim 13, wherein the link quality estimate is a SNR.

17. (New) A method for power control in a base station apparatus, the method

comprising:

determining a received power control instruction for base station transmission on a

common channel; and

adjusting a transmission power level of the power control instruction.

18. (New) The method of claim 17, wherein a transmission power level of the power

control instruction is initially set to a reference value.

19. (New) A remote station apparatus comprising:

means for generating a link quality estimation in response to a first power control

instruction received on a common channel; and

means for generating a second power control instruction in response to the link quality

estimate,

Attorney Docket No.: 000411

Customer No.: 23696

wherein the second power control instruction includes one or more commands configured

to adjust a transmit power of the common channel at a base station.

20. (New) The remote station apparatus of claim 19, further comprising means for

controlling transmission power in response to the first power control instruction.

21. (New) The remote station apparatus of claim 19, further comprising means for

transmitting the second power control instruction.

22. (New) The remote station apparatus of claim 19, wherein the link quality

estimate is a SNR.

23. (New) A base station apparatus comprising:

means for determining a received power control instruction for base station transmission

on a common channel; and

means for adjusting a transmission power level of the power control instruction,

wherein the means for adjusting are coupled to the means for determining.

24. (New) The base station apparatus of claim 23, wherein a transmission power

level of the power control instruction is initially set to a reference value.

25. (New) A machine-readable medium embodying a method for power control in a

remote station apparatus, the method comprising:

generating a link quality estimation in response to a first power control instruction

received on a common channel; and

generating a second power control instruction in response to the link quality estimate,

wherein the second power control instruction includes one or more commands configured

to adjust a transmit power of the common channel at a base station.

Attorney Docket No.: 000411

Customer No.: 23696

26. (New) A machine-readable medium embodying a method for power control in a

base station apparatus, the method comprising:

determining a received power control instruction for base station transmission on a

common channel; and

adjusting a transmission power level of the power control instruction.
